

Please read this guide entirely for instructions, guidelines and warnings before using your CritterZone.

# USER GUIDE

## GENERAL INFORMATION

**Please read all tips and warnings before using your CritterZone, and use only as directed within this User Guide.**

CritterZone is designed to run continuously with energy level equal to a hamster in a wheel (about 3-watts). Allow the CritterZone to remain plugged in 24-hours/day for optimal air quality.

To increase the effectiveness and clean the air up to 800 sq. ft, CritterZones have a small, quiet fan. Very little bark, with a lot of cleaning bite! But if the sound is still a concern, simply move the unit to an outlet further away, to another room or to a hallway.

'sniff sniff...' CritterZone Air Naturalizers emit a light "metallic" odor. This is a natural reaction from the air naturalization process. The strength of the scent will vary based on the current level of pollutants in the air and will lessen as the air is cleaned. The settings on the CritterZone are adjustable as needed and are explained below.

## OPERATIONAL INFORMATION

**Plug in your CritterZone.** Use a grounded outlet. Wall units should be plugged directly into a wall outlet. Corded units should be placed on a dry and level surface. Leave a safe amount of slack in the 10' cord. Keep out of reach of curious, playful furry friends.

**Choose a setting.** [HIGH MED LOW] For larger areas, spot treatments or areas with dense air pollution, set the unit to HIGH (far left). For smaller areas or continual air cleaning, set the unit to MED (middle). To maintain air quality, smaller areas, or if the natural scent of the CritterZone is too strong, set the unit to LOW (far right).

The CritterZone Air Naturalizer is designed to run continuously, so there is no On/Off switch. Simply plug the unit into an operational outlet, and let the CritterZone improve your air quality 24/7.

## LOCATION GUIDELINES

Use on a level surface at least 6" away from heat sources such as ranges, fireplaces or heaters. Operate indoors only.

Do not block air vent openings so the air naturalization process has optimal opportunity to fill the area and improve the air quality.

**TIP:** Air circulation helps! Use near an oscillating or ceiling fan to increase the range of the CritterZone and assist with its effectiveness.

**TIP:** Moisture helps! CritterZone technology utilizes air moisture during the Air Naturalization process. Humidifiers can help!

## ELECTRICAL AND OPERATIONAL SAFETY WARNINGS

**Reduce your risk of fire or electrical shock. Failure to follow these instructions can result in injury, electrical shock, fire or death.**

Do not use in or around water or water sources. Use dry paws and hands when operating the unit. Always unplug the unit before servicing, cleaning, or when using spray or steam floor cleaners.

CritterZone units are comprised of moving and electrical parts, much of which are contained within the outer casing. The outer casing can carefully be removed for detailed cleaning **ONLY** when unplugged. Complete cleaning instructions can be found at our CritterZone YouTube Channel: [www.youtube.com/user/TheCritterZone](http://www.youtube.com/user/TheCritterZone)

Should ANY part of the CritterZone unit or CritterZone accessory become loose or look to be of concern, return the unit immediately for replacement. **NEVER attempt to retrieve a loose or broken part from the unit when it is plugged in, or from the outlet itself.**

(Corded Units) Ensure the power cord is securely plugged into the unit. If cord or plug appears damaged, return the unit immediately for exchange or repair. Do not pull, carry or lift unit by power cord. Securely grasp the plug at the base when unplugging from outlet.

(Wall Units) Do not plug wall unit into a power strip or surge protector. Wall units are designed to plug into wall outlets.

CritterZone units are designed to run continuously, therefore are always powered ON when plugged in. Keep all tails, fingers, fur, hair and clothing away from opening when unit is operational.

When "reactivating" a soiled area, spray the water directly on the fabric before plugging in the CritterZone. Do not spray water on or at the unit or the outlet. (see TIPS for more info on "reactivating")

How does something so small  
handle a problem so **BIG**?

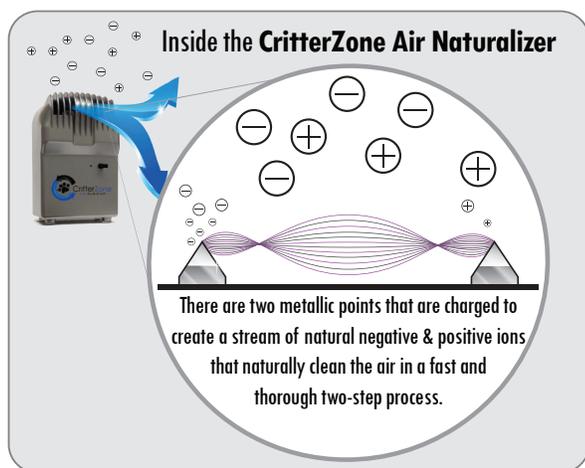

## Virtually ELIMINATE ODORS & BACTERIA

*For less than a penny a day, CritterZone continuously restores the air for up to 800sq ft!*

### HOW IT WORKS

**It's so small...** The CritterZone Air Naturalizer creates a continual natural, charged flow that quickly fills the room or vehicle: allowing for such a small unit to clean the indoor air up to 800 sq ft. And it still costs less than a penny a day to operate!

**Why does it work?** The sun provides the *outdoor* air with the power and energy it needs to clean itself. CritterZone provides *indoor* air with a similar natural charge it needs to virtually eliminate odors, allergens, dust and bacteria. Scientifically speaking, Air Naturalization involves two distinctly different, but related, continual processes: Bi-Polar Ionization & Plasma Conversion. Visit our website at [www.CritterZoneUSA.com](http://www.CritterZoneUSA.com) for more details!

### 30-DAY GUARANTEE

**30-DAY MONEY BACK GUARANTEE!** If you aren't 100% Tail-Wagging Satisfied with your CritterZone, simply return it for your money back. View our return policy on the warranty tab on our website homepage.

**Other Questions?** Please call 612.235.4911 or visit our website at [www.CritterZoneUSA.com](http://www.CritterZoneUSA.com) to contact us and we will be happy to assist you with your questions or concerns.

### TIPS AND USES

#### CLEANING SPILLS & ACCIDENTS IN MATERIALS

CritterZone is very effective in helping remove odor and germs within materials. Works great on upholstery, carpet, mattresses, clothing, shoes and hard soluable surfaces such as wood-- and in vehicles, too! (with car adapter on corded units)

Simply lay the CritterZone unit face-down directly on or keep within 6" of the soiled area and leave for 30-60 minutes. Repeat 2-3 times or as necessary depending on the degree and type of the accident.

**Accident "Reactivation"** For old spills or accidents, "Reactivate" the incident by lightly misting the area directly with water. The CritterZone will then utilize the moisture to clean the area of odor and bacteria.

Use for spills, air pollutant issues and air quality improvement:

- › *Pet or Human Urine & Vomit*
- › *Spoiled Food Residue*
- › *Fire or Cigarette Smoke*
- › *Perfume or Cologne*
- › *Car Exhaust & Gasoline*
- › *Kitchen Garbage or Pantry*
- › *Litter Pans, Cages & Kennels*
- › *Help with Allergies or Asthma*
- › *Healthy Air for Infants*
- › *Healthy Air for Seniors*

### CLEANING & MAINTENANCE

The CritterZone Air Naturalizer is entirely filterless, so there aren't any filters to buy or change. Your CritterZone product carries a 1-Year manufacturer's warranty and in order to maintain this warranty, it is necessary to do regular cleaning and maintenance.

Please make sure the rear airflow vent on the unit is free from hair or debris. Simply remove any debris by brushing it away from the vent with your finger.

The front grillwork must also be kept clean- you may notice buildup from aerosolized chemicals or VOCs (Volatile Organic Compounds). Cat owners WILL experience white crystals, which is a direct result of airborne cat urine being neutralized by the CritterZone. Simply unplug the unit and run a cotton swab between the air vents to remove any debris. It is recommended that you view the cleaning instructional YouTube video that appears on our channel to learn how to care for your CritterZone.
