

## Scraper/Wiper

The Scraper/Wiper mat gives you that one, two punch in knocking out the dirt before it infiltrates your building.

## Wiper

The wiper mat finishes the job of the scraper. Removes remaining moisture.

## Slip Resistant

Depending on the material used, some provide a better traction than others, more anti-fatigue, better scraping functionality ... and so on.

## Scraper:

*(Recommended for all outside entrances)* Scraper mats should always be used with other entrance mats that will provide wiping properties to remove fine soil and water from feet.

## Flow Through

Primary function: to allow heavy moisture to drain safely while providing a slip-resistant surface. (These often possess anti-fatigue properties as well.)

## Anti-Fatigue

**Ergonomic** matting used to increase worker comfort and productivity. These can be divided into further categories based on environment : Dry vs Wet, Heavy, Medium or Light Duty.

Let your **Dalco Sales Professional** help you determine your matting strategy based on functionality, appearance, and budget.
