

An anatomical illustration of the human heart and circulatory system. The heart is shown in a semi-transparent red, with its major arteries and veins branching out. The background is a blue-tinted human torso with a glowing ECG (heart rate) line overlaid across the chest area. The text is positioned in the upper left quadrant.

**Every day,
your heart beats 100,000 times,
sending 2,000 gallons of blood
surging through your body.**

It's vital that your heart has the proper nutritional balance
in order to keep the correct rate, rhythm & tone.

**Have your heart checked for these
important factors with a quick evaluation
using a Heart Sound Recorder.**

Book your appointment for this test!
(Only **\$20** for the test)
