4" Set-back Plate Model 240

If you don't feel that you are getting the performance out of your motor you should, this could be an easy and inexpensive solution.

An innovative flared shape allows this four inch set-back bracket more transom contact area to reduce stress and improve the motor's stability.

We start with two pieces of 1/2" thick aluminum. Once formed to shape, they are heat treated and anodized to provide years of performance with outboards up to 200 HP.

Standard BIA bolt pattern with multiple mounting locations.

Overall dimensions 14" x 5" x 4". Weight 16 lbs.

This bracket can be installed directly on the transom or on to an existing jack plate.
