

### **AutoDesk**

Autodesk helps people imagine, design, and create a better world. Everyone from students and hobbyists to engineers, architects, design professionals and digital artists uses Autodesk apps, software and services to unlock their creativity and solve important design challenges. For over 30 years, Autodesk has played a pivotal role in the design and creation of things. From our beginnings as the creator of AutoCAD, to becoming a leader in 3D design and engineering software, Autodesk tools have been used to design, engineer, build and create iconic projects like the Shanghai Tower, New York's Freedom Tower, the redesign of the Ford Mustang, and memorable blockbuster movies, including the last 18 Academy Award winners for Best Visual Effects.

Autodesk is about making it possible for anyone, any innovator with an idea, any individual with a creative spark, to use our software to experience their ideas before they are real; to be creative and make something; and to explore and prove, much more quickly than ever before, whether their idea is going to work or not. With our move to cloud and mobile-based platforms, we are helping designers and engineers see "down the line" in the design process and avoid unintended consequences, which is especially critical in today's complicated, interconnected society.
